

**Manfredo Perdigão do Carmo**

*Riemannian Geometry*

**Translated by Francis Flaherty**

**Birkhäuser**

**Boston · Basel · Berlin**

# CONTENTS

Preface to the first edition . . . . .	ix
Preface to the second edition . . . . .	x
Preface to the English edition . . . . .	xi
How to use this book . . . . .	xii
<b>CHAPTER 0—DIFFERENTIABLE MANIFOLDS</b> . . . . .	1
§1. Introduction . . . . .	1
§2. Differentiable manifolds; tangent space . . . . .	2
§3. Immersions and embeddings; examples . . . . .	11
§4. Other examples of manifolds. Orientation . . . . .	15
§5. Vector fields; brackets. Topology of manifolds . . . . .	25
<b>CHAPTER 1—RIEMANNIAN METRICS</b> . . . . .	35
§1. Introduction . . . . .	35
§2. Riemannian Metrics . . . . .	38
<b>CHAPTER 2—AFFINE CONNECTIONS;</b>	
<b>RIEMANNIAN CONNECTIONS</b> . . . . .	48
§1. Introduction . . . . .	48
§2. Affine connections . . . . .	49
§3. Riemannian connections . . . . .	53
<b>CHAPTER 3—GEODESICS; CONVEX NEIGHBORHOODS</b> . . . . .	60
§1. Introduction . . . . .	60
§2. The geodesic flow . . . . .	61
§3. Minimizing properties of geodesics . . . . .	67
§4. Convex neighborhoods . . . . .	75
<b>CHAPTER 4—CURVATURE</b> . . . . .	88
§1. Introduction . . . . .	88
§2. Curvature . . . . .	89
§3. Sectional curvature . . . . .	93
§4. Ricci curvature and scalar curvature . . . . .	97
§5. Tensors on Riemannian manifolds . . . . .	100

<b>CHAPTER 5—JACOBI FIELDS . . . . .</b>	<b>110</b>
§1. Introduction . . . . .	110
§2. The Jacobi equation . . . . .	110
§3. Conjugate points . . . . .	116
<b>CHAPTER 6—ISOMETRIC IMMERSIONS . . . . .</b>	<b>124</b>
§1. Introduction . . . . .	124
§2. The second fundamental form . . . . .	125
§3. The fundamental equations . . . . .	134
<b>CHAPTER 7—COMPLETE MANIFOLDS; HOPF-RINOW AND HADAMARD THEOREMS . . . . .</b>	<b>144</b>
§1. Introduction . . . . .	144
§2. Complete manifolds; Hopf-Rinow Theorem . . . . .	145
§3. The Theorem of Hadamard . . . . .	149
<b>CHAPTER 8—SPACES OF CONSTANT CURVATURE . . . . .</b>	<b>155</b>
§1. Introduction . . . . .	155
§2. Theorem of Cartan on the determination of the metric . . . . .	156
by means of the curvature . . . . .	156
§3. Hyperbolic space . . . . .	160
§4. Space forms . . . . .	162
§5. Isometries of the hyperbolic space; Theorem of Liouville . . . . .	168
<b>CHAPTER 9—VARIATIONS OF ENERGY . . . . .</b>	<b>191</b>
§1. Introduction . . . . .	191
§2. Formulas for the first and second variations of energy . . . . .	191
§3. The theorems of Bonnet-Myers and of Synge-Weinstein . . . . .	200
<b>CHAPTER 10—THE RAUCH COMPARISON THEOREM . . . . .</b>	<b>210</b>
§1. Introduction . . . . .	210
§2. The Theorem of Rauch . . . . .	212
§3. Applications of the Index Lemma to immersions . . . . .	221
§4. Focal points and an extension of Rauch's Theorem . . . . .	227
<b>CHAPTER 11—THE MORSE INDEX THEOREM . . . . .</b>	<b>242</b>
§1. Introduction . . . . .	242
§2. The Index Theorem . . . . .	242
<b>CHAPTER 12—THE FUNDAMENTAL GROUP OF MANI- FOLDS OF NEGATIVE CURVATURE . . . . .</b>	<b>253</b>
§1. Introduction . . . . .	253
§2. Existence of closed geodesics . . . . .	254

§3. Preissman's Theorem . . . . .	258
<b>CHAPTER 13—THE SPHERE THEOREM . . . . .</b>	<b>265</b>
§1. Introduction . . . . .	265
§2. The cut locus . . . . .	267
§3. The estimate of the injectivity radius . . . . .	276
§4. The Sphere Theorem . . . . .	283
§5. Some further developments . . . . .	288
References . . . . .	292
Index . . . . .	297
